DAILY WEATHER & FLOOD SITUATION REPORT
SATURDAY, SEPTEMBER 12, 2020

All main rivers (**Jhelum, Chenab, Ravi and Sutlej**) are discharging normal flows except for River Indus which is at **Medium Flood Stage** in "**Guddu-Sukkur Reach**" and **Low Flood** at **Kotri**. It is in **Normal** flow condition at rest of the locations (**Tarbela, Kalabagh, Chashma & Taunsa**). The actual inflows & outflows of main rivers at important control structures alongwith water levels and storage position of major reservoirs (**Tarbela, Mangla & Chashma**) as of 0600 hours today have been indicated in **Annexure-I**.

2. **Tarbela and Mangla Reservoirs** continue to maintain their Maximum Conservation Levels (MCLs) of **1550.00 feet** and **1242.00 feet** since 28th August 2020 and 1st September 2020 respectively. **The dam operating authorities alongwith Mangla Dam FMC are exercising utmost care and vigilance in reservoir's operation by strictly following SOPs and associated Dam Safety Guidelines.**

3. Yesterday's trough of shallow **Westerly Wave** over Northern parts of the country today lies over Kashmir and adjoining areas whereas weak **Seasonal Low** lies over Northeast Balochistan bringing in weak moist currents from Arabian Sea into upper parts of the country up to 2000 feet.

4. For the ensuing 24 hours, mainly dry weather has been predicted by FFD, Lahore, over most parts of the country. However, isolated thunderstorm/ rain may occur over the upper catchments of River Indus & Jhelum, besides Southern & Southeastern Sindh during the same period. River Indus is likely to flow in **Medium Flood** with a receding trend in "**Guddu-Sukkur Reach**" and in **Low Flood** with rising trend at **Kotri** during the next 24 hours. No prominent rainfall event in the country has been reported by FFD, Lahore, during the past 24 hours.

5. Pakistan Meteorological Department (PMD) is monitoring the prevailing weather system on Round-the-Clock basis and keeping all concerned fully abreast of the situation through its specialized unit (Flood Forecasting Division, Lahore).

NOTES: "Mild" Categories

- Low Flood: River flowing within deep (winter) channel(s) but about to spill threatening only river islands/belas
 Medium Flood: River partly inundating river islands/belas
 High Flood: River almost fully submerging islands/belas and flowing upto high banks/bunds but without encroachment on the freeboard

"Danger" Categories

- Very High Flood (VHF): River flowing between high banks/bunds with encroachment on the freeboard
 Exceptionally High Flood (EHF): Imminent danger of overtopping/breaching, or the high bank areas have become inundated

* Flood Classification: (applied on downstream discharge/Outflow)

** (R) Signifies "Rising" Flood, (F) Signifies "Falling" Flood, (S) Signifies "Stable" Flow Condition & NR stands for "Not Received"
