**DAILY WEATHER & FLOOD SITUATION REPORT**  
**MONDAY, SEPTEMBER 14, 2020**

River Indus is flowing in **Low Flood** at "**Guddu-Sukkur-Kotri Reaches**" whereas it is in **Normal** flow condition at rest of the locations (**Tarbela, Kalabagh, Chashma & Taunsa**). Other main rivers (**Jhelum, Chenab, Ravi and Sutlej**) are flowing normal. The actual discharges of main rivers at important control structures alongwith water levels and storage position of major reservoirs (**Tarbela, Mangla & Chashma**) as of 0600 hours today may be seen at **Annexure-I**.

2. **Tarbela and Mangla Reservoirs** continue to maintain their Maximum Conservation Levels (MCLs) of **1550.00 feet** and **1242.00 feet** since 28<sup>th</sup> August 2020 and 1<sup>st</sup> September 2020 respectively. **The dam operating authorities alongwith Mangla Dam FMC are exercising utmost care and vigilance in reservoir's operation by strictly following SOPs and associated Dam Safety Guidelines.**

3. A fresh trough of shallow **Westerly Wave** lies over Northern parts of Afghanistan whereas weak **Seasonal Low** still persists over Northeastern Balochistan and adjoining areas.

4. According to FFD, Lahore, mainly dry weather is expected over most parts of the country during the next 24 hours. However, isolated thunderstorm/ rain may occur over **Rawalpindi Division** (Punjab), **Malakand, Hazara & Peshawar Divisions** (Khyber Pakhtunkhwa), Southern & Southeastern Sindh and Northeastern Balochistan including the upper catchments of Rivers Indus & Jhelum during the same period. No prominent rainfall event has been reported by FFD, Lahore, in the country during the past 24 hours.

5. For the ensuing 48 hours, FFD, Lahore, has predicted scattered thunderstorm/ rain over Southern Punjab, whereas isolated thunderstorm/ rain over Punjab (**Rawalpindi Division**), Khyber Pakhtunkhwa (**Malakand, Hazara & Peshawar Divisions**) and Northeastern Balochistan including upper catchments of Rivers Indus & Jhelum.

6. Pakistan Meteorological Department (PMD) is monitoring the prevailing weather system on Round-the-Clock basis and keeping all concerned fully informed through its specialized unit (Flood Forecasting Division, Lahore).

## NOTES: "Mild" Categories

Low Flood: River flowing within deep (winter) channel(s) but about to spill threatening only river islands/belas  
Medium Flood: River partly inundating river islands/belas  
High Flood: River almost fully submerging islands/belas and flowing upto high banks/bunds but without encroachment on the freeboard

## "Danger" Categories

Very High Flood (VHF): River flowing between high banks/bunds with encroachment on the freeboard  
Exceptionally High Flood (EHF): Imminent danger of overtopping/breaching, or the high bank areas have become inundated

\* Flood Classification: (applied on downstream discharge/Outflow)

\*\* (R) Signifies "Rising" Flood, (F) Signifies "Falling" Flood, (S) Signifies "Stable" Flow Condition &amp; NR stands for "Not Received"
