Combined Live Storage of the country's major reservoirs (Tarbela, Chashma and Mangla) as of today is **10.706 MAF (80.17%** of the total combined live storage of **13.354 MAF)**. **Annexure-I** contains detailed discharge data of major rivers, major reservoirs water levels & storage position and temperature data of Skardu.

2. According to FFD, Lahore, yesterday's Westerly Wave continues to prevail over northern parts of Afghanistan. Light moist currents from the Bay of Bengal (India) are penetrating the upper parts of the country up to 3,000 feet whereas Seasonal Low today lies over western parts of Balochistan.

For the next **48 hours**, scattered wind thunderstorm/rain of moderate intensity has been predicted over the **Islamabad, Punjab** (Rawalpindi, Sargodha, Gujranwala, Lahore, Faisalabad & D.G. Divisions) and **Khyber Pakhtunkhwa** (Peshawar, Kohat, Bannu & D.I Khan Divisions) including upper catchments of all major rivers of the Indus River Basin (Source: FFD, Lahore).
4. As per the extended weekly Weather Outlook of FFD, Lahore for September 26 – October 02, 2024, scattered thunderstorm rain of moderate intensity is expected over upper catchments of all major rivers from September 26, 2024 onward, however, as a result, no flooding situation is expected in major rivers during this week-long period.

NOTE-1: "Mild" Categories

Low Flood:

River flowing within deep (winter) channel(s) but about to spill threatening only river islands/belas

Medium Flood:

River partly inundating river islands/belas

High Flood:

River almost fully submerges belas and flowing upto high banks but without encroaching the freeboard

NOTE-2: "Danger" Categories

Very High Flood (VHF):

River flowing between high banks/bunds with encroachment on the freeboard

Exceptionally High Flood (EHF):

Imminent danger of overtopping/breaching, or the high bank areas have become inundated

NOTE-3: * Flood Classification: (applied on downstream discharge/Outflow)

* (R) Signifies "Rising" Flood, (F) Signifies "Falling" Flood, (S) Signifies "Stable" Flow Condition & NR stands for "Not Received"

* Flood Classification for today is w.r.t. yesterday's Flood Classification at 0600 hours.

NOTE-4: Maximum Live Storage Capacity has increased from 13.321 MAF to 13.354 MAF due to de-silting of Chashma Barrage causing increase in its Live Storage Capacity from 0.278 MAF to 0.311 MAF.
